Key Research Themes include:

Ancient and modern ore deposit systems, from the cratons to the margins of the Australian plate;

The deformation and breakup of plates: the Australian plate and its ancient intraplate orogenies;

Polarity flips in subduction zones, slab tears and windows and the initiation of subduction;

The Naked Plate Boundary of New Zealand: an evolving margin;

The Alpine Fault drilling project;

Climate and active tectonics: contrasting views from the tropical to temperate extremes;

Complexity of a "real plate system" from idealized geodynamic models;
